

Preventative maintenance contracts from an industry specialist.

Test chambers are like most machinery, they can't just be left to run without professional regular servicing or they will fail, cause inconvenience and become less cost effective.

Some older chambers must also be checked for gas leaks on a yearly basis to comply with recent EC legislation.

Our aim is to provide a premium service to ensure reliability and maintain optimum performance from our own and any other make of test chamber we have under contract.

- Preventative maintenance contracts tailored to your needs and budget, consisting of one or two scheduled visits per year with additional breakdown visits free of additional charge.
- Experienced qualified mobile regional service engineers with up to date certification.

- Parts inclusive contracts if required.
- Contracts with 24 hour call out available.
- UKAS traceable calibration during service visits if required.
- Mobile service vans carry extensive spare parts to ensure a rapid response and reduce down time to a minimum.
- Comprehensive factory based spare parts holding.
- Refrigeration gas reclaim units carried at all times.
- All work carried out to ISO 9000 standards.
- Signed check sheets provided after each visit.
- UK and worldwide support available.
